Initiator:

An inhalation device comprising:

- (i) a breath-activated inhaler comprising a medicament reservoir housed within a housing which comprises a mouthpiece and breath-activated means which prevents dispensing from the reservoir until a patient breathes through the mouthpiece and;
- (ii) a protective casing surrounding the breath activated inhaler, the casing comprising a body portion and a removable cover which may be displaced to allow a patient access to the mouthpiece to use the breath-activated inhaler whilst it is within the casing, the breath-activated inhaler being removable from the protective casing and operable outside the casing.

This invention relates to inhalation actuatable dispensers for use with inhalers such as dry powder inhalers and aerosol containers containing actuator assemblies which contain medicaments for inhalation therapy, are pressurized with liquid propellants, and include a metering valve through which a series of measured medicament doses can be dispensed. In particular the invention relates to inhalation actuatable dispensers which are removable retained within an outer casing.

Inhalation actuatable dispensers for use with aerosol container assemblies of the type described above are known, their general purpose being to afford proper coordination of the dispensing of a dose of medicament with the inhalation of the patient thereby allowing the maximum proportion of the dose of medicament to be drawn into the patient's bronchial passages. Examples of such dispensers are disclosed in British Patent Specification No. 1,460,530, U.S. Patent Nos. 3,630,190, 3,630,191 and United States Patent Nos. 3,630,294, 3,630,295, 3,630,296, 3,630,297, 3,630,1048, 3,630,1049, 3,630,1050, 3,630,1051, 3,630,1052, 3,630,1053, 3,630,1054, 3,630,1055, 3,630,1056, 3,630,1057, 3,630,1058, 3,630,1059, 3,630,1060, 3,630,1061, 3,630,1062, 3,630,1063, 3,630,1064, 3,630,1065, 3,630,1066, 3,630,1067, 3,630,1068, 3,630,1069, 3,630,1070, 3,630,1071, 3,630,1072, 3,630,1073, 3,630,1074, 3,630,1075, 3,630,1076, 3,630,1077, 3,630,1078, 3,630,1079, 3,630,1080, 3,630,1081, 3,630,1082, 3,630,1083, 3,630,1084, 3,630,1085, 3,630,1086, 3,630,1087, 3,630,1088, 3,630,1089, 3,630,1090, 3,630,1091, 3,630,1092, 3,630,1093, 3,630,1094, 3,630,1095, 3,630,1096, 3,630,1097, 3,630,1098, 3,630,1099, 3,630,1100, 3,630,1101, 3,630,1102, 3,630,1103, 3,630,1104, 3,630,1105, 3,630,1106, 3,630,1107, 3,630,1108, 3,630,1109, 3,630,1110, 3,630,1111, 3,630,1112, 3,630,1113, 3,630,1114, 3,630,1115, 3,630,1116, 3,630,1117, 3,630,1118, 3,630,1119, 3,630,1120, 3,630,1121, 3,630,1122, 3,630,1123, 3,630,1124, 3,630,1125, 3,630,1126, 3,630,1127, 3,630,1128, 3,630,1129, 3,630,1130, 3,630,1131, 3,630,1132, 3,630,1133, 3,630,1134, 3,630,1135, 3,630,1136, 3,630,1137, 3,630,1138, 3,630,1139, 3,630,1140, 3,630,1141, 3,630,1142, 3,630,1143, 3,630,1144, 3,630,1145, 3,630,1146, 3,630,1147, 3,630,1148, 3,630,1149, 3,630,1150, 3,630,1151, 3,630,1152, 3,630,1153, 3,630,1154, 3,630,1155, 3,630,1156, 3,630,1157, 3,630,1158, 3,630,1159, 3,630,1160, 3,630,1161, 3,630,1162, 3,630,1163, 3,630,1164, 3,630,1165, 3,630,1166, 3,630,1167, 3,630,1168, 3,630,1169, 3,630,1170, 3,630,1171, 3,630,1172, 3,630,1173, 3,630,1174, 3,630,1175, 3,630,1176, 3,630,1177, 3,630,1178, 3,630,11

force to the inhaler. The arrangement of Figures 8a and 8b comprises a body portion (20) and a cover (22) which is partially inserted about a pivot point (42). Opening of the cover (22) does not apply a closing force to the breath-activated inhaler. Closing lever (20) is positioned at the top of the protective casing and is concealed and arranged such that upon pivoting the closing lever (20) downward pressure is applied to the second vial of the breath-activated inhaler (Figure 6).

Figures 7a and 7b illustrate an alternative form of protective casing comprising a body portion (20) and a movable cover (22) which is pleased from a point at the top of the body portion and provides a closing force to the inhaler as the cover (22) is opened.

Figures 8a and 8b of the accompanying drawings illustrate a breath-activated inhaler. In accordance with the invention, when the protective casing (20) is used, it is arranged to accommodate several sizes of aerosol vials. The body portion (20) of the inhaler has an aperture (22) through which a shroud (20) extends which accommodates the aerosol vial (not shown). A series of shrouds (20) may be fabricated having different lengths so as to accommodate various sizes of aerosol vial.

Whilst a closing spring may be positioned within the top of the shroud (20), in a similar manner to the closing spring (42) shown in Figure 4, a shroud having a spring external of the shroud (20) may be employed. The shroud (20) is provided with a flange (24) and closing spring (25) is positioned around the shroud (20) extending between the flange (24) and a stop or the top of the protective casing (20). When the cover (22) is opened, the breath-activated inhaler, together with the shroud (20) is moved (Figure 8b) compressing the closing spring (25). When the patient breathes through the inhaler (20), the breath-activated mechanism is triggered causing the shroud (20) and aerosol vial to move to fire the aerosol vial.

Figures 8a and 8b of the accompanying drawings illustrate an alternative closing mechanism which may be incorporated into the protective casing of an inhalation device in accordance with the invention. The body portion (20) of the protective casing may comprise a separate upper portion (20) which envelopes the end of the aerosol valve (6). Closing spring (42) is positioned within the upper portion of the casing (20) to act against the base of the aerosol vial (6). The upper portion (20) is retained on the body portion (20) of the protective casing by complementary flanges (22 and 24) which constitute a threaded segment such that rotation of the upper portion (20) in the direction of the arrow

X (Figure 8b) causes the upper portion (20) to move down over the body portion (20) thereby compressing closing spring (42) and applying the necessary closing force to the breath-activated inhaler. Closing lever (20) is positioned at the top of the protective casing and is concealed and arranged such that upon pivoting the closing lever (20) downward pressure is applied to the second vial of the breath-activated inhaler (Figure 6).

Figures 10a and 10b illustrate an inhalation device in accordance with the invention which incorporates the features of Figures 8 and 9. The top of the protective casing comprises an upper portion (20) through which extends a shroud (20) whose length is selected to accommodate the particular size of aerosol vial (6). Closing spring (25) extends between flange (24) on the shroud (20) and a stop or top (22) of the upper portion (20) and is compressed by downward movement of the upper portion (20) upon rotation in the direction of the arrow X. When the patient breathes through the inhaler (20), the breath-activated device is triggered and the shroud (20) moves downward under the influence of the spring (25) thereby bring the aerosol vial.

In a further embodiment of the invention (not illustrated in the drawing) the shroud (20) shown in Figures 8 and 10 may be dispensed with and replaced by a circumferential flange extending around the aerosol vial, equivalent to flange (24), again which closing spring (25) will act. The circumferential flange may be fabricated as a snap-on component around the aerosol vial e.g., in the region of the neck of the vial. This arrangement will obviate the need for fabricating a series of shrouds to accommodate the different sizes of aerosol vial, since the aerosol vial will simply extend through the top of the protective casing.

#### Claims

1. An inhalation device comprising:  
 (a) a breath-activated inhaler comprising a medicament reservoir mounted within a housing which comprises a mouthpiece and breath-expulsion means which prevents dispensing from the reservoir until a patient inhales through the mouthpiece, and  
 (b) a protective casing surrounding the breath activated inhaler, the casing comprising a body portion and a movable cover which may be displaced to allow a patient access to the mouthpiece to use the breath-activated inhaler whilst it is within the casing, the breath-activated inhaler being removable from the protective casing and operable outside the casing.
2. An inhalation device as claimed in Claim 1 in which the protective casing completely encloses the inhaler.
3. An inhalation device as claimed in Claims 1 or Claim 2 in which the inhaler comprises an aerosol

vial containing propellant and medicament and equipped with a dispensing valve.

4. An inhalation device as claimed in any preceding Claim in which the movable cover is arranged for movement about a pivot point positioned towards the top of the protective casing.

5. An inhalation device as claimed in any one of Claims 1 to 3 in which the movable cover is arranged for movement about a pivot point positioned towards the bottom of the protective casing.

6. An inhalation device as claimed in any preceding Claim in which the protective casing additionally comprises means for applying a closing force to the breath-activated inhaler.

7. An inhalation device as claimed in Claim 6 in which the means for applying the closing force comprises a lever separate from the movable cover.

8. An inhalation device as claimed in Claim 8 in which the means for applying the closing force comprises the movable cover.

9. An inhalation device as claimed in Claim 8 in which the means for applying the closing force comprises an upper portion of the protective casing which is mounted on the remainder of the body portion by a screw thread arrangement, rotation of the upper portion causing movement thereof along the body portion.

10. An inhalation device as claimed in any preceding Claim in which the breath-activated inhaler comprises means to switch the inhaler from the breath-activated mode to a press-and-breathe mode.

11. An inhalation device as claimed in Claim 10 which is constructed and arranged such that the inhaler is converted to and maintained as a breath-activated inhaler upon insertion into the protective casing.

12. An inhalation device as claimed in any preceding Claim in which the breath-activated inhaler includes a component means for providing an indication of the quantity of medicament remaining in the aerosol vial.

13. An inhalation device as claimed in any preceding Claim in which the inhaler comprises an aerosol vial and the protective casing comprises a shroud exceeding the aerosol vial.

14. An inhalation device as claimed in Claim 13 in which the shroud is removable within the remainder of the protective casing and spring biased to urge the aerosol vial towards a firing position.

15. A protective casing suitable for an inhalation device as claimed in any preceding Claim comprising a body portion and a movable cover.
